Your Comments:

The Draft Cleanup Plan removes far too little contaminated sediment from the Willamette River. Of the 2200 most contaminated acres of river sediment, the Draft Plan proposes to dredge a mere 167 acres, or approximately 8%. That is inadequate to say the least.

Willamette Riverkeeper recommends that at least 1000 acres of polluted sediment be removed from the river.

The goal of the cleanup must be to end the Fish Consumption Advisory related to pollutants found in the Portland Harbor stretch of the Willamette River.

That must apply to all people, including breast-feeding women. The EPA must provide a date by which the advisory will be lifted.

Those who have liability for the PCBs, PAH, DDT and other toxic and persistent pollutants in the river sediments, must meet their community obligation to do the right thing and conduct a comprehensive and timely cleanup.

Sincerely,

(b) (6)
